

zystm care®

hospital design

Zystm®

modular facility systems

## **Profile**

Zystm is a preferred supplier of logistics and design solutions for hospitals, laboratories and clinics initially for the Scandinavian market.

Based on many years of industry experience, Zystm offers a proven product line based on holistic solutions.

With staff know-how and many years of interior design experience we make sure that the product not only has a high quality and functionality but also is used properly for the environments where it is used.

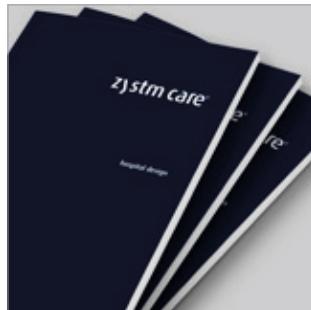

In collaboration with selected suppliers, users, clients and architects, it is the aim of Zystm to continuously expand, adapt and develop the range to meet market requirements.

We believe that innovative optimisation of logistics, inventory and equipment options creates better well-being in daily life for both patients and staff.

Zystm is a Danish-owned company with sales and manufacturing headquarters in Herning. Zystm also has sales offices south of Oslo and Cambridgeshire UK. Zystm's steel production is located in Bjerringbro.

With this catalogue, we look forward to showing you how broad the Zystm product ranges are, and if you desire to see our products, we can offer to present these in our own showroom in Herning where they are developed. We are available for dialogue, consultation and design suggestions at any-time. Contact Zystm we create the right workplace for your needs.

## Technical catalogues from Zystm

### Zystm Care · Hospital design

Modular furniture range for hospitals and clinics.

- Cabinets

# Strategy ensures quality throughout the entire process

The key to a good and effective workplace is a holistic working environment. Therefore, Zystm® believes in holistic solutions focusing on staff and patients. Based on many years of experience and our extensive knowledge of working logistics in the hospital sector, we develop and design entire work environments for hospitals and clinics.

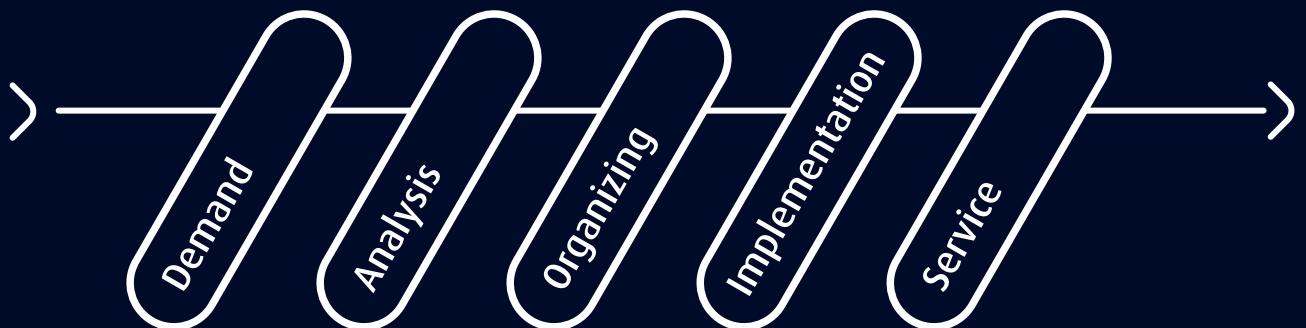

Zystm documents all products of this program in BIM format, which means that a dialogue between advisor, customer and Zystm can be done in Revit or a similar software solution. Furthermore, large parts of the product range have been drawn in Inventor.

## Vision

Our vision is to develop holistic work environments for hospitals and clinics. At the same time, in collaboration with users and architects, we are innovative developers continuously improving and optimizing hardware components for work environments in hospitals and clinics.

## Mission

Along with leading specialists, we provide our customers with the most flexible and high quality products for all work environments for hospitals and clinics.

# Know-how and flexibility allows efficiency

As a leading supplier in the market, we can offer you an in-depth analysis of your work tasks. As a customer, you can choose to let us analyse your logistic options or you can use us as a regular »hardware« supplier. Whatever your choice, you are guaranteed a high level of performance and service when using Zystm as a supplier.

With our expertise, we can ensure efficient logistics and thus great flexibility for many working environments. Above all, this means liberating humans from unnecessary strain as well as providing relief for productive work. This helps increase energy and improves concentration levels for primary tasks making the entire process more efficient.

An effective working environment where things integrate together reduces cost, improves performance and increases productivity. This is of great everyday help to staff, but equally to patients and relatives.

All our partners and suppliers have been carefully selected and all have great experience in the industry. This ensures an uncompromising product.

With Zystm as a partner, you are assured high performance and good service.

There is a large flow of daily consumer goods in hospitals and laboratories. For the sake of overview and being able to manage the logistics of all these products, Zystm® has developed a new intelligent front for cabinets and drawers.

Zystm's intelligent front ensures that the user gets a quick and effective overview of what products are stored in the cupboard. This saves both time and money and minimises the number of openings of the door, which reduces contamination of products.

Where before labels have been stuck to door fronts, the Zystm front is designed so the labelling of cabinet content can be on

the handle across the length or width of the front panel. This provides an easy and uniform transparency which is also very flexible and easy to clean.

Exterior marking signs are the same size as the signs used for the modular system inside the cabinets. This is an easy approach for replacement of labels and coherent logistics. The grip and the labels are available in both long and short versions.

The labelling signs snap on to the handle. The signs come with a removable front to ensure maximum hygiene during cleaning.

The different combinations of standard drawers, drawers for modular inserts and pull-out shelves allows the user to arrange them precisely to their needs.

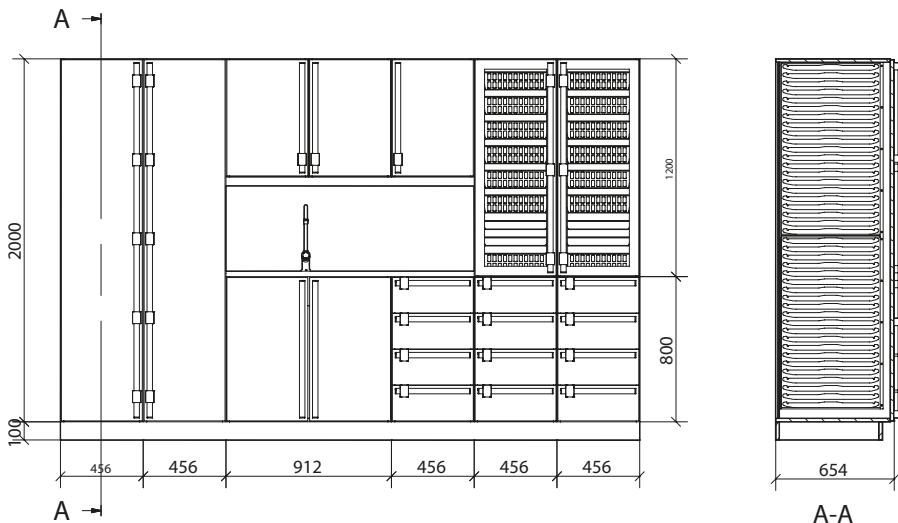

When changing work procedures and requirements, the user can easily adapt the signs without assistance.

Having easy dismantling and removal of the modules and shelves ensures a cleaning regime that has a high level of hygiene.

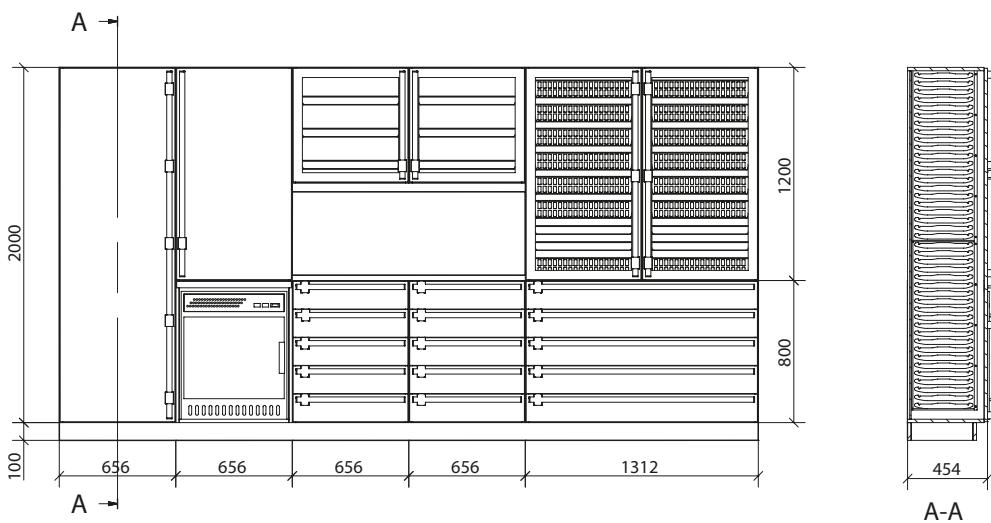

Above; Zystm's cabinet series with standard dimensions and with functional long version handles.

**Standard enclosure width 456 mm, depth 654 mm**

zystem care®

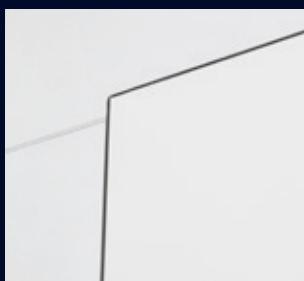

hospital design

# Product specification

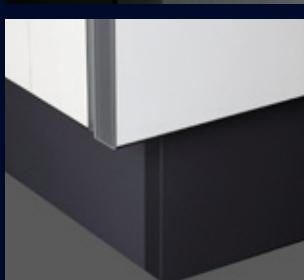

Cabinet sides, top and bottom are constructed in 19 mm durable melamine, backboard is an 8 mm melamine-coated board.

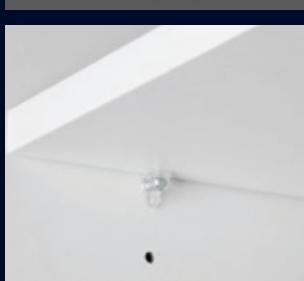

Addition and cover are made in standard body colour and material, but can be made with a laminate surface for an additional charge.

All cabinet and surfaces of the cabinets are non-porous for and crevice free for hygiene purposes. The carcass front is fitted with a concave sealing strip that allows doors or drawers to close softly and tightly providing a dust seal.

Plinths are made in waterproof sheet cladded in 0.7 mm high-pressure laminate on both sides finished in color dark grey. Plinths come as joint or individual plinths.

Shelves are made of 12 or 19 mm particleboard with melamine or high pressure laminate surface and all edges are sealed with 1 mm synthetic banding for optimal hygiene.

Light pelmet strips under top cupboards are manufactured from melamine-coated board with all edges sealed. They can also be supplied in laminate-coated board with a front colour for an additional charge.

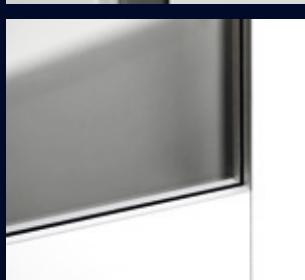

Zystm's cabinet hinge is specifically designed for hospital and laboratory use. The anodised aluminium quality hinge comes with self lubricating washers to the moving part. The hinge has been rigorously tested to 200,000 opening and closings with a maximum opening of 270 degrees.

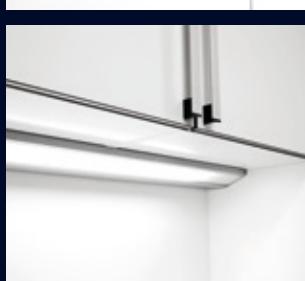

As standard, all cabinets come with an adjustable magnetic lock.

Doors and drawer fronts are made from 16 mm chipboard with 0.7 mm laminate to both the front and back. Edges are sealed with impact resistant and 2.0 mm 3D alloy/synthetic lipping for optimal hygiene.

Glass doors are manufactured in MDF with a laminate surface. The glass is glued into a frame construction making it both stable and very easy to clean.

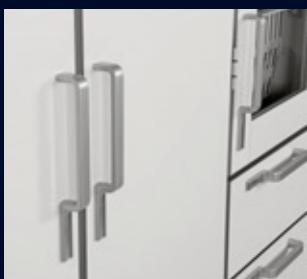

Zystm light panel mounted to the underside of wall cupboard. This closed light duct has been specially developed for areas where there are high demands for hygiene.

Laminate tabletops are manufactured from 28 mm chipboard complete with 0.7 mm laminate on the top and relief laminate on the back. All edges are sealed with laminate edges or edges in 2 mm ABS synthetic material. If tabletops are desired in other materials, please contact Zystm.

Telescopic slides can be positioned in perforated rail mounted in the cabinet side, the slide can be fitted with shelves and modules as required by the user.

Label bridge handle in cast material. The handle is designed for numbering and description affixed using 12 mm Dymo.

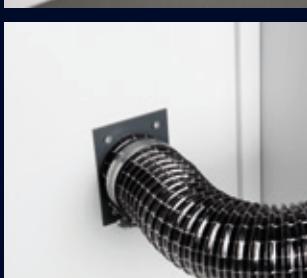

The protected functional handle is made from solid aluminium and follows the length of the door/drawer front. An information label can be affixed to the full length of the handle, allowing the possibility for the cabinet content to be displayed.

Cabinet fronts can be delivered with magnetic laminate for an extra charge.

Ventilation of chemical cabinets. The cabinets are equipped with a ventilation extract spigot at the top of the cabinet. Ø100 mm.

Ventilated base cabinets are supplied with screw-mounted grey plastic extract spigot and flex hose supplied in standard lengths.

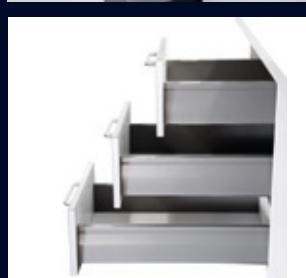

Lighting in cabinets consist of LED lighting with an on/off switch on the door.

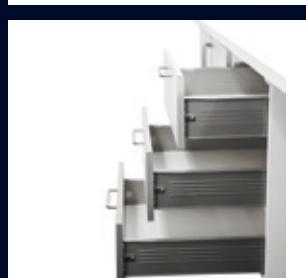

Drawer for module action constructed from solid front and cleanable powder coated steel frame with 100% telescopic extension.

Conventional drawers are constructed with powder-coated steel sides, melamine to bottom and back and a 100% telescopic extension with soft-close. Tall drawers are provided with rails matching the depth of the cupboard.

Drawers with 100% extension and soft-close.

Drawers with 80% extension.

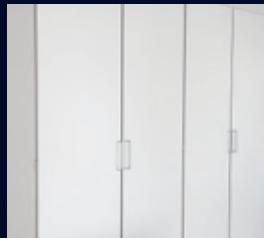

# Product specification

## Doors, handles, hinges and module sides with multiple inserts

When ordering a cabinet, the following stated selections are to be considered:

Item no., type of door, door colour, handle type and hinging side R/L.

### Doors

Laminate door  
Colour; see colour chart

Display door "frame"  
Colour; see colour chart

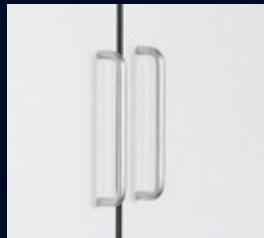

Display door "plain"  
Colour; see colour chart

Alu display door  
Colour; see colour chart

### Handle

Pull handles  
Standard grip

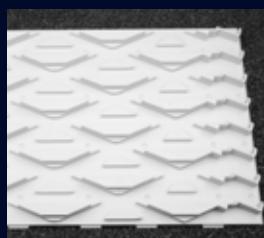

Operation handle, long  
Operation handle, short

Sign handle Dymo

### Module sides

Module side with plastic  
multi-inserts with built-in stop  
and the option for a relief  
wheel. Multi-insert, allows  
you to choose from straight,  
oblique or tilt.

Straight insertion also  
available.

### Hinges and wheels

Default

The relief wheel can be  
removed for cleaning.

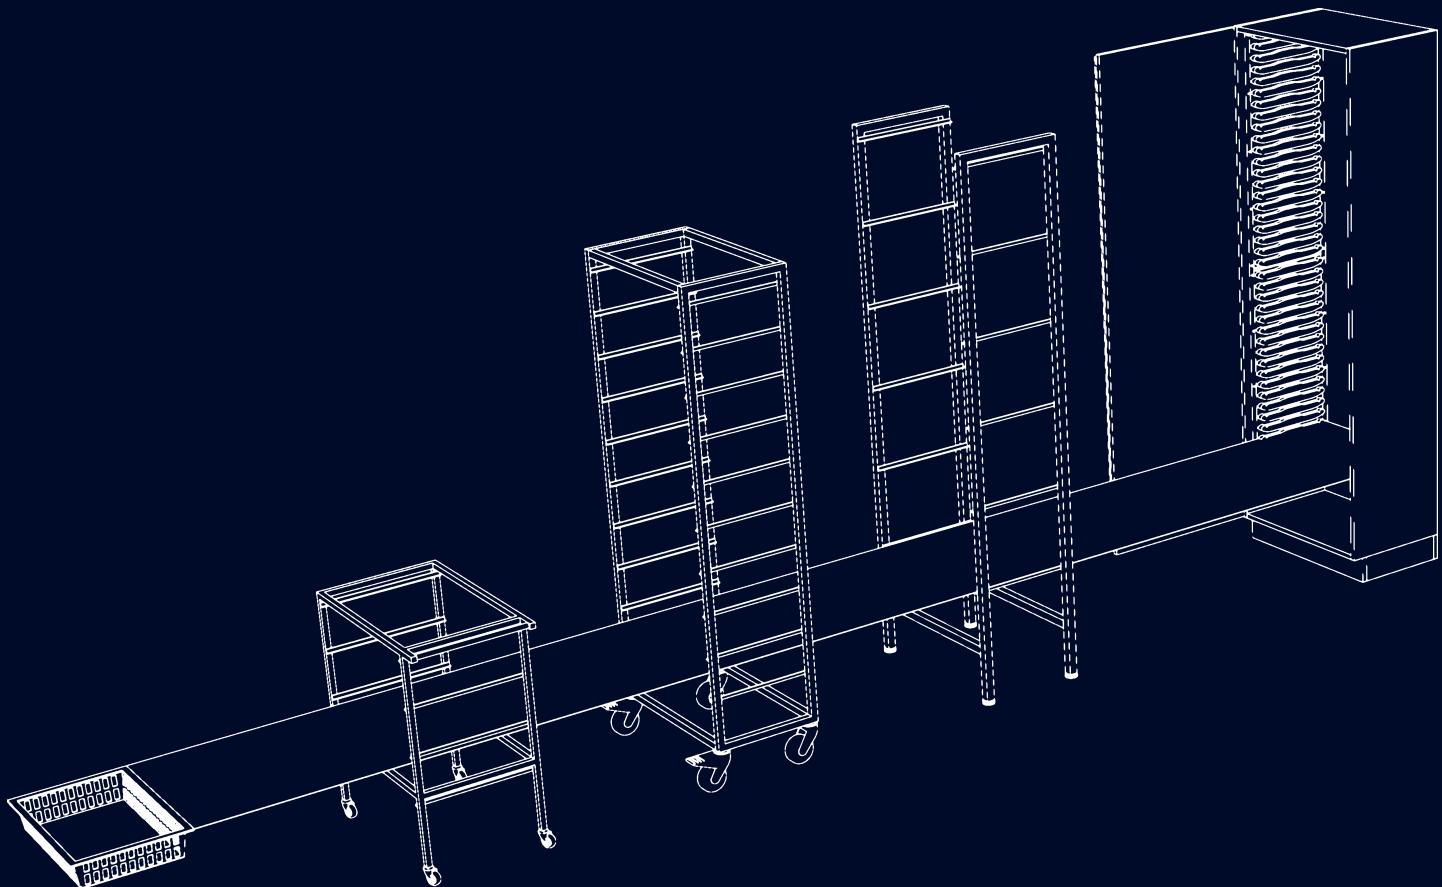

### Trays and baskets for cupboards with module sides

Please find the product  
range assortment in the  
logistics section.

# Zystm® Fire and radiation shielded cabinets

The requirements for fire and radiation shielded cabinets have intensified, and demands are high for both free-standing cabinets, niche-cabinets and cabinets for pass-through between corridor and adjoining treatment rooms.

Zystm's programme in pass-through cabinets and fire/lead cabinets has been developed in collaboration with several architects, users and The Danish Institute of Fire and Security Technology (DBI). The cabinets are tested and approved by DBI, but should always be approved by the local fire authority, or radiation-hygienic institute.

The programme includes cabinets which conform to both BD30 and BD60 requirements. Both cabinet models can be radiation shielded to comply with the requirements for scanner and X-ray areas from the Radiation Hygienic Institute. The cupboards are mainly used in sterile areas, surgical and anesthesia areas, X-ray and scanning areas, cytostatics and cleanroom areas.

Fireproof safes come with inlaid paste in the door. Door closers are optional, and you must be sure to specify these separately.

Cupboard width	Frame width	x
456	494	400
656	694	550

#### Minimum sizes:

Cupboard width	262 mm
Frame width	300 mm
Cupboard height	421 mm
Frame height	457 mm

The Zystm Interlock system prevents contamination between compartments through the pass-through cabinets. Zystm works with two Interlock systems where Interlock System 1 covers the basic needs, preventing opening of the same cupboard from both sides simultaneously.

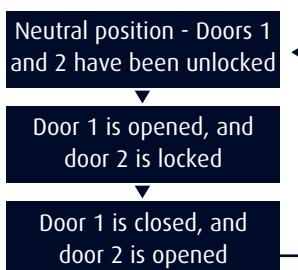

Not only does Interlock System 2 prevent the above, but also prevents accidental opening of the cabinets due to pressure difference between compartments, or imbalance of the ventilation system. Interlock System 2 also ensures that the cabinet 'settles' before access is gained to the cabinet.

## Zystm® Interlock 1

For same pressure to room space

- Regular cabinet door
- Mechanical lock is released by door switch

Illustration of function:

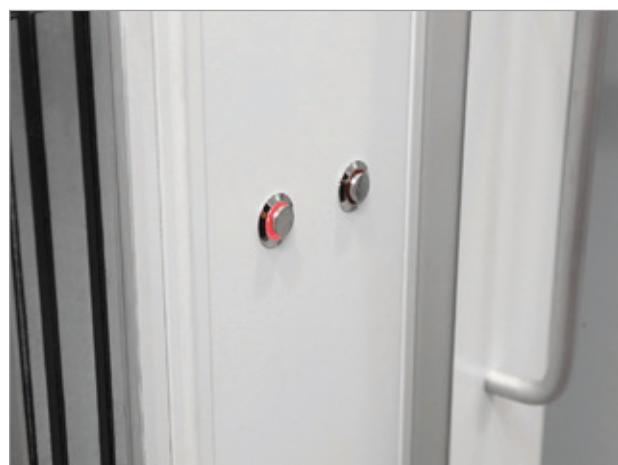

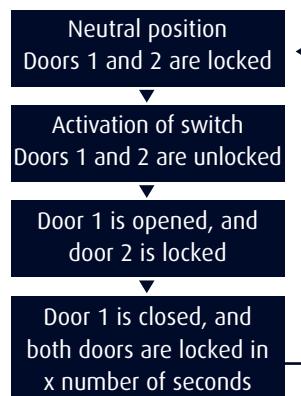

## Zystm® Interlock 2

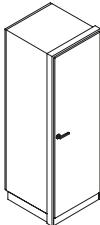

For differential pressure between rooms

- Heavy doors
- The electromagnetic lock is triggered with a push button

Illustration of function:

Description	Item no.
<b>Electronic combination lock</b> Right/left	1300114

Symo locks are used where there are no requirements for suiting.

Ruko lock 1614 is a six-pinned drop-shaped lock used on all cabinets with the exception of staff cabinets.

Ruko lock 1514 is a five-pin drop-shaped lock used on all cabinets with the exception of staff cabinets.

Ruko lock 1608 is a round six-pin cylindrical lock used on staff cabinets.

Ruko lock 1508 is a round five-pin lock for use in staff cabinets. All Ruko locks are available as suited or independently locking.

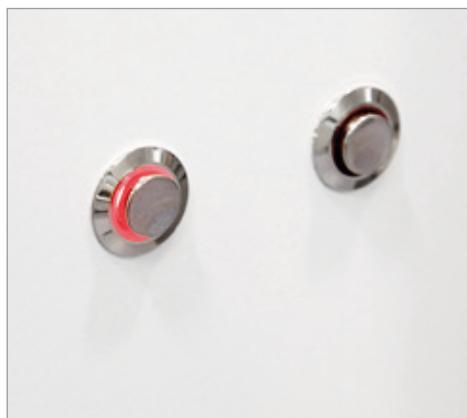

Independantly locking: Each lock has its own key.

Suited locking: The same key for all locks.

#### Interlock locking system

Interlock 1 without red indicator light  
Interlock 2 with touch-free switch and timer

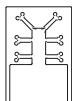

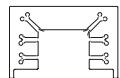

1630173  
1630171

Safety is always a high priority with all of our products. We offer a variety of solutions when it comes to locking cabinets for your and others' safety.

Interlock system with timer and manual trigger.

Description	Item no.	Height	Width	Depth
<b>Perforated rails for telescopic guides</b> Suspension slots on rail at a distance of 25 mm 8 pcs. for a tall cabinet	4602037			950
<b>Perforated rails for telescopic guides</b> Suspension slots on rail at a distance of 25 mm 4 pcs. for 1 base cabinet	4602039			645
<b>Shelf support for perforated rail</b> Steel shelf support	4602044			
<b>Shelf support for perforated rail</b> Rubber cover for shelf support	4602032			

Telescopic slides are constructed from galvanised steel and corrosion protected. Precision pull-out on double ball bearings, ensuring a steady and smooth movement. The extension can be loaded with up to 60 kg.

Pins on the pull-out ensure that trays, baskets and shelves are properly fixed. Available in extension lengths of 450 mm and 650 mm, which can be mounted on both the strip or directly to cabinet walls.

The extension slides are also supplied for pass-through cabinets with extension to both sides.

Long model	1510034		600	
				
<b>Mounting set R/L with telescopic guides</b>				
for mounting under free-hanging tabletop				
Short model	1510032		400	
Long model	1510031		600	

- Saves time
- No barcode scanning necessary
- Very simple procedure for staff
- No errors
- Better overview and immediate ordering

- Automatic emergency ordering
- Items in the department ("prohibited symbol")
- Dynamic here-and-now solution
- Easy and simple integration with the hospital's own software

The contents of the left side of the tray is available, the right side is blocked with "prohibited" symbol.

The contents of the left side of the tray is used. Left sign is slid to the right, new products are automatically ordered. The sign on the right side is activated by the left sign being slid to the right and the "Prohibited" sign removed. The contents on the right side can now be used.

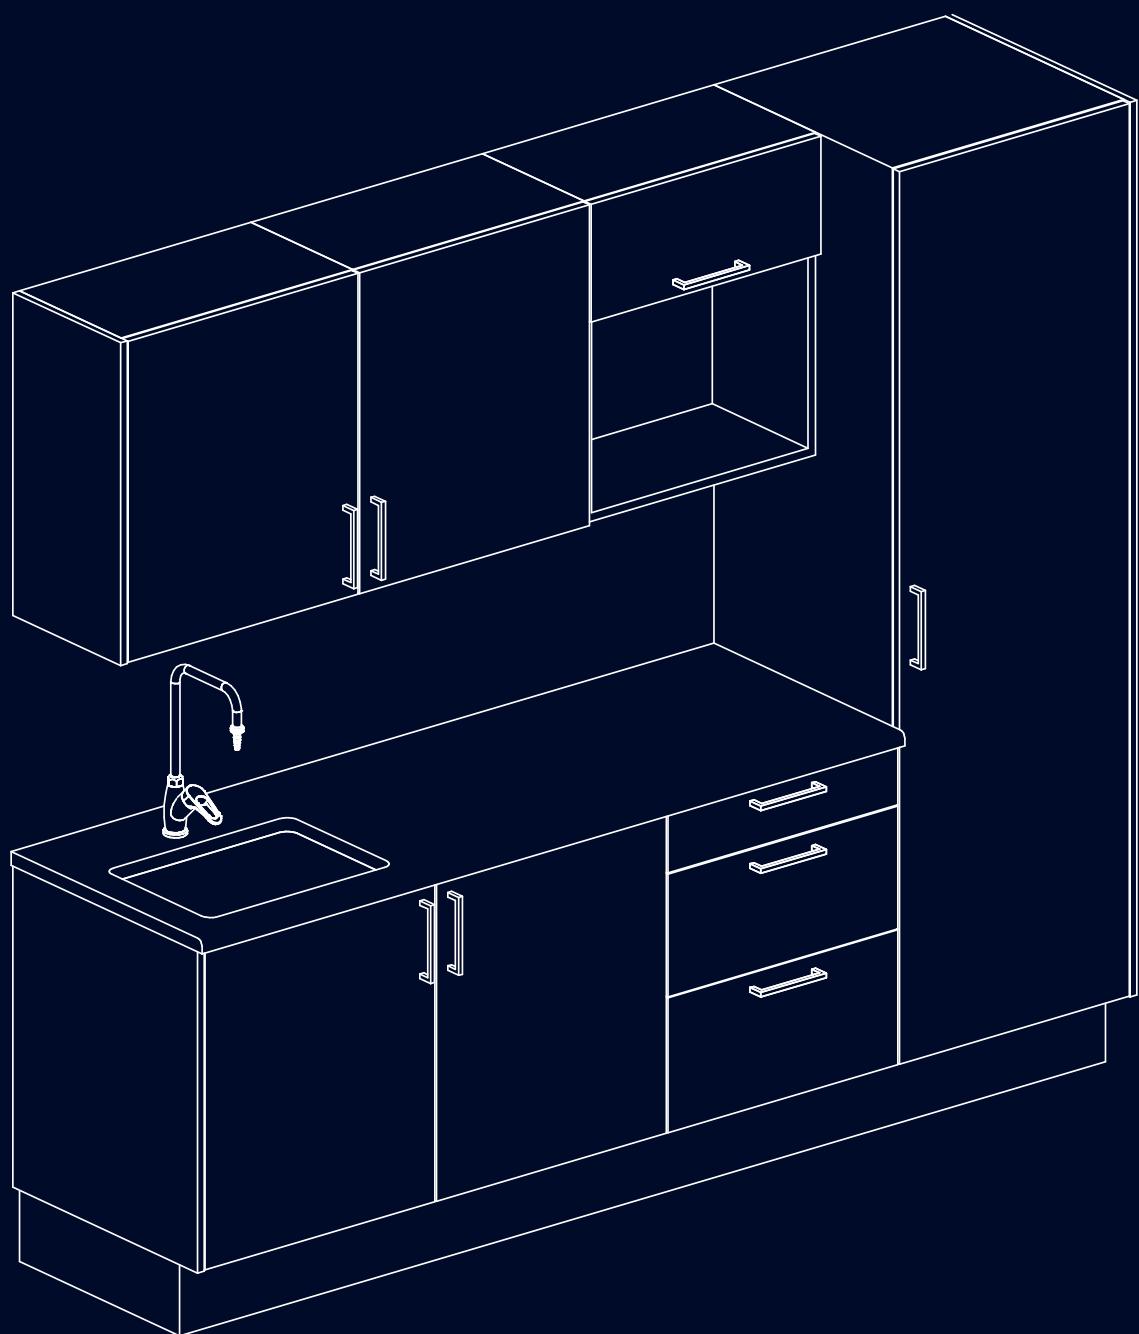

New content on the left side is delivered. The sign is pushed to the left and the "prohibited" sign appears. The sign on the right side is slid to the right and the items can be used.

Acute need of more items. Left sign on both sides is slid to the right. Acute ordering has been made.

# Zystm® · 7 kitchen cabinets

The cupboard body is made from 19 mm melamine board and is sealed along all edges with 1 mm edge strips, with the exception of the front edge, this is glued to 2 mm beaded edge to ensure the seal of the cabinet and soft closing.

Solid door with wear-resistant and melamine surface and 2 mm plastic edge.

Solid door with laminate-coated surface and 2 mm plastic edge.

Solid laminated door with solid wooden lipping in birch or beech.

Solid door, veneered and with solid wooden edge in beech, birch or ash.

As standard, handles are pull type.

Drawers are with solid steel sides and 16 mm melamine base and backing.

Hinges are adjustable CLIP TOP hinges which can be adjusted both in height and cupboard depth.  
The hinge has been tested for 200,000 openings and has an opening radius of 120 degrees.

Zystm 7 has been designed for use in secondary areas such as staff and tea kitchens in departments. The assortment is designed from standard kitchen module dimensions which allows the use of regular white goods.

The range allows for the arrangement of a flexible kitchen which, takes working ergonomics and functionality into account.

Fronts and tabletops are available in various configurations matching the furniture.

The flexibility to use multiple product groups together will contribute to ensuring user well-being and satisfaction for years to come.
