

FiLO Wire Shelving

FiLO Wire Shelving

Our **FiLO** Wire Shelving is available in a chromed steel and a stainless steel version. The wire shelves are height adjustable each 25 mm without the use of any tools. Each shelf can carry a load up to 200 kg. The **FiLO** shelves are available in different lengths and depths and the number of shelves per unit can be freely chosen. The height of the units depends on the height of the shelving posts. These posts are available in 3 different heights.

It is possible to attach dividers and enclosures to the wire shelves. Our **FiLO** Wire Shelving also exists in mobile version with 4 swivel castors. It is very simple to connect add-on units, because the wire shelves are easily connected with each other by means of S-hooks. It is also possible to make U- or L-shaped formations. A big advantage of our **FiLO** system is that the corners remain freely accessible. There are no posts that can cause inconvenience when you are putting products in the corners.

On demand we can supply other accessories for our **FiLO** wire shelves, like sloping shelves, push handles, bumpers, wine bottle shelves, clothing rails,...

You can find the dimensions of our **FiLO** Wire Shelves and Posts in the tables on the next page.
