## ISO MODULES IN ABS

## MODUL-iT ISO MODULES IN ABS

Our modules in injection moulded ABS form the basis of the MODUL-iT system. All modules have a standard ISO outer dimension of 600x400 mm. They can be exchanged between all cabinets, racks and trolleys of the MODUL-iT or MODU-FLEX system.

Within our assortment of modules there is a choice between trays and baskets, both in light grey (RAL7035) or transparent ABS.

- Trays have a closed base and sides. They are available in heights of 50, 100 and 200 mm.
- Baskets have a perforated base and sides. They are available in heights of 100 and 200 mm.

With the MODUL-iT modules and their accessories, all material can be stored in a very efficient and orderly fashion, whether for medication, infusions, nursing or general consumables. The modularity of the MODUL-iT system always offers the most flexible, clear and ergonomic solution with a considerable saving of space.

LG Chem

All MODUL-iT ISO modules are manufactured from injection moulded ABS. This in grey as well as transparent. Our choice for ABS is justified by the good performance of ABS in terms of scratch and impact resistance and the better score in terms of chemical resistance compared to Polycarbonate (PC).

### DIVIDERS

All MODUL-iT ISO modules can be divided in both directions with light grey or transparent separations. Thanks to our unique fastening system, these dividers can be fixed in one movement without any additional accessories. You can also shorten the separations at the predetermined breaking points.

## STOP SYSTEM

All MODUL-iT ISO modules can be equipped with a stop system. This allows all modules to be used as a drawer in the various storage and transport elements without the risk of them falling to the ground.

## LABEL HOLDERS

With all MODUL-iT ISO modules, label holders can be attached to the edge of the trays and baskets as well as to the separations inside. With the baskets, the label holders can also be attached to the meshes in the sides.

## XY COORDINATES

Numbers and letters are placed on the top of the edge of the modules to easily indicate the XY coordinates of the compartments.

## USE OF DIVIDERS

- 1) Long divider 600 mm
- 2) Short divider 400 mm
- 3) Shortened divider with T-connector

### LONG DIVIDER 600 mm

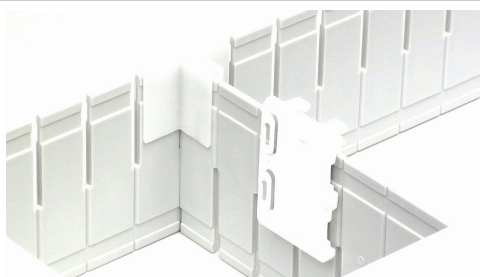

The teeth of the long dividers point upwards. These dividers must always be placed in the module first. All long dividers can be shortened at the predetermined breaking points.

### SHORT DIVIDER 400 mm

The teeth of the short dividers point downwards. These dividers must always be placed in the module after the long dividers. All short dividers can be shortened at the predetermined breaking points.

### SHORTENED DIVIDER WITH T-CONNECTOR

Shortened dividers are attached to the other dividers by means of a T-connector. This allows you to create compartments of different sizes within the modules.
